

System File Copy

1 Overview

This document explains how to copy the system files over to a user USB memory stick.

2 Preparation

Grab USB memory stick and plug it into one of the USB ports on the Panel-PC.

Get a USB mouse and plug it into the second USB port. Use an USB hub if only one USB port exists.

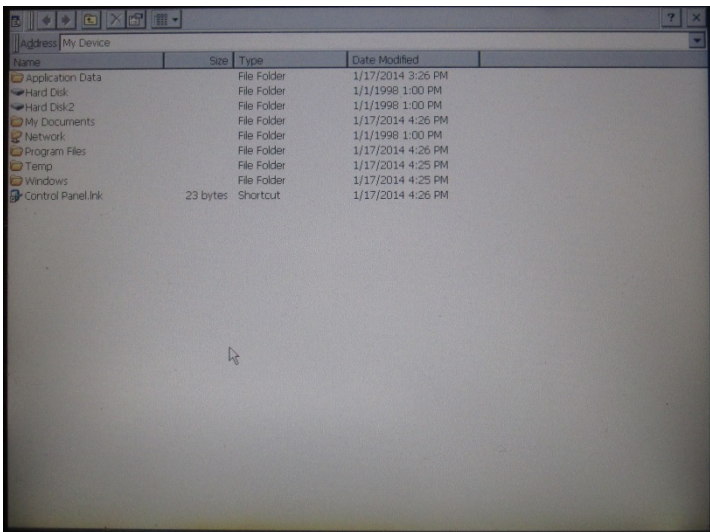

3 Open Windows Explorer

- Click Start (in the lower left corner) and open Windows Explorer.

4 Select hard disk and open

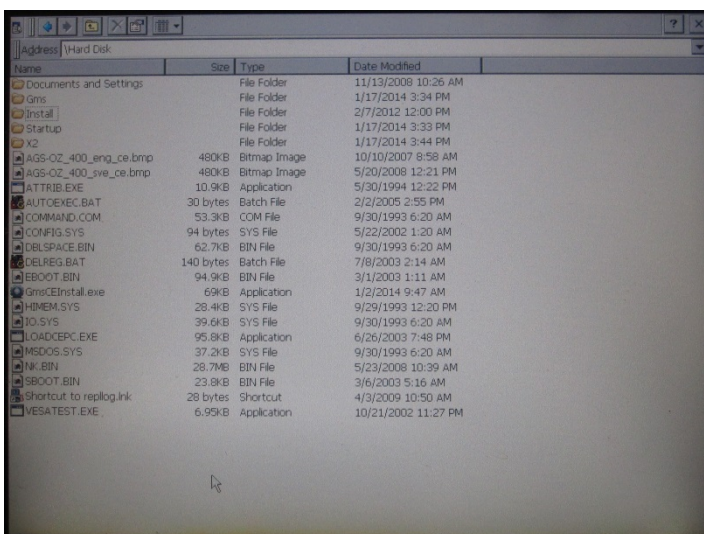

You should see “Hard disk” which is the internal CF Flash memory and the “Hard disk2”, your USB memory. Double click on “Hard disk”.

5 Select folders

Select folder “Gms”, right click and select “copy”. Browse to “Hard disk2” and copy the folder to chosen place.

Do the same with the “Startup” folder.

6 Zip and mail

Zip the folders and mail them to: bengt.lofqvist@dametric.se and jonas.ollmar@dametric.se.

We will respond to you as soon as we examined the content.
