

- A If the system is connected to power, be sure to turn it off before starting the assembly.
- B Pull out the CMD-RM1, the CMI-RM1 and any nearby card to get more space around where to mount the CMA-RM1 card.
- C Mount the extra card guide rail at the second assembly hole to left of the bottom CMI-RM1 card guide rail. After having mounted the guide rail there should be one visual mounting hole in between the new guide rail and the CMI-RM1 guide rail.
- D Pull out any old extension card and mount the new one. Don't forget to mount it with a 3\*5 screw and a plate.
- E Use the two plastic straps to fix the cables on the new card guide rail so that there is no risk that they get hooked up by the nearby cards.
- F Mount the previously pulled out cards and the CMA-RM1 front plate.
